

CLIMATE CHANGE & CARBON FINANCE

**We are pioneers in implementing projects
that help reduce greenhouse gases**

Our Climate Change practice has been operating since 2001. We were one of the first law firms in Brazil to form a dedicated group to advise clients on issues related to this topic. The current "Climate Change & Carbon Finance" practice area represents a natural extension of the firm's longstanding practice in environmental law, agribusiness, forestry investments, energy law and regulatory policy, administrative law, capital markets, and banking regulation.

With the Paris Agreement coming into force, several countries and companies will be required to meet requirements to reduce their greenhouse gas emissions, boosting the revival of carbon markets. As a result, the demand for projects that aim to definitively reduce these emissions has increased. Given this scenario, Brazil can position itself as a natural seller of carbon credits and attract investment in projects that contribute to reducing greenhouse gas emissions.

MAIN SERVICES

- Consulting on climate change issues.
- Multidisciplinary work on projects involving environmental law, agribusiness, forestry investments, energy law and regulatory policy, administrative law, capital markets, and banking regulation.
- Implementation of both voluntary market emissions projects and those based on the Kyoto Protocol.
- Mitigating the risk of carbon credit generation, which will potentially increase companies' market value.
