

ENVIRONMENTAL

Legal excellence to address environmental challenges and opportunities

Since 1997, our Environmental Law practice has offered legal services covering Brazilian socio-environmental legislation, from the most traditional, such as licensing and control of environmental degradation, to the most specific, including management of contaminated areas, impacts on traditional communities, and access to genetic resources and associated traditional knowledge.

Our team is comprised of dedicated professionals with solid practical experience, representing clients in relevant cases and providing strategic business advice with legal certainty.

We act preventively to avoid legal risks by conducting consultancies, audits, negotiating contracts, legally reviewing technical environmental reports, and advising clients on dealings with the relevant environmental authorities. Using a reactive approach, we negotiate consensual solutions and conduct administrative and judicial proceedings, including civil and criminal investigations, public civil actions, class actions, constitutional actions, criminal actions, actions for the anticipated production of evidence, and ordinary actions between private entities. We also manage socio-environmental crises, advising on communication with authorities and civil society.

We have a multidisciplinary team of lawyers specializing in environmental, capital markets, real estate, and energy law, ready to assist in the financing and implementation of bioeconomy projects and businesses and payments for environmental services, including carbon credits.
